Are You Testing on the Right Platforms?

This is the question app developers, testers and product managers ask themselves every day. As more businesses transition to digital and rely on high quality interactions with customers via mobile apps and the web, it's essential to have the right test coverage for devices, operating systems and web browsers to deliver a memorable digital experience.

understand the level of testing required to cover all your markets and user profiles on an ongoing basis.

As always, the goal is continuous quality and a winning digital experience. Let us help you plan your test coverage accordingly.

And this is precisely why we've been publishing our Digital Test Coverage Index each quarter: to help your organization

How We Built the Index

No single data source tells the full story, so for the indexes in this report we've combined exclusive customer usage data from the Perfecto cloud with mobile market sales data in the respective geographies, along with our own analysis.

For organizations that have access to web traffic and user behavior analytics—we recommend that you merge your own data with our indexes to achieve the optimal test coverage.

The indexes offer up-to-date benchmarks that list the top smartphones, tablets, operating systems and browsers across specific geographies on which you should develop and test your mobile, web and responsive web apps.

How to Read the Index

Taking both mobile and web testing into account, each country featured in the report gets its own "digital coverage" profile. These profiles contain testing recommendations for mobile devices, operating system versions and web browsers, combined to create a holistic view for each region of what's required for digital quality testing.

To identify the **device test coverage** that best suits your app, you'll first need to determine your device coverage goal—30%, 50% or 80% of the market (See diagram below). Next, select your target country and then refer to the corresponding device list, making note of the "recommended OS version" column to see the recommended

testing mix of devices and platforms for you. For the mobile devices index, we include an up/down arrow or equal sign to indicate usage changes since last quarter. Devices that are new to the index or are reference devices running the latest OS are marked as such.

To plan for **web browser testing**, choose your target country and your coverage goals based on what browsers and desktop operating systems you're supporting. In our Web Test Coverage Index, we list the browser/OS combinations—ranging from 30% to 50% to 80% coverage—that you should test on to achieve the desired market coverage.

Because the digital market is so dynamic, we've included an **updated market calendar** showing what device models and OS versions to look out for in the near future so you can plan ahead and refresh your test coverage plan continuously. And finally, we've added a 2015 Mobile Retrospective that takes a look back at all the devices and OS versions released throughout the past year.

Mobile Device Coverage

- 30% of the market can be covered with 10-16 devices running the recommended operating system
- 50% of the market can be covered with 17-25 devices, plus the 30% coverage index, and running the recommended OS
- 80% of the market can be covered with 26-32 devices, plus the 50% index, and running the recommended OS

Key Takeaways

Market Trends

1. Apple continues to dominate in the U.S., Canada and Australia markets with more than 40% share in each region. In Europe, Android has a clear advantage, with an aggregated 72% market share. But it's worth noting that the UK is one EU5 country that has a more even split between iOS and Android. *(Refer to #10 for specific recommendations for verticals)*
2. BlackBerry devices are still important in the Canadian region, accounting for almost 8% of the market. In November, BlackBerry launched the first BlackBerry Android devices with physical keyboards (BlackBerry Priv). With that in mind, analyzed data indicates that BlackBerry OS 10 market share will decrease over the next two quarters.
3. Windows Phone keeps its average share of 10% in EU5 markets while it is still weak in the U.S. with only 3% share. Microsoft's mobile market share is expected to grow throughout 2016 now that Windows 10 is available on phones.
4. Legacy devices are still popular in major markets. For example, Samsung Galaxy S3, HTC One M7, iPhone 5S, iPad 2 and iPad Air remain important for various mobile and web apps and need to be part of organizations' testing labs.

Samsung Galaxy S3
Released: Nov 2012
Top 16 - Australia
Top 32 - Global

iPad 2
Released: Mar 2011
Top 16 - Global

5. On Android OS, Samsung remains the smartphone maker with the highest market share in EU5, followed by Sony, HTC, LG, Huawei and Motorola. In the U.S., market data shows that Samsung, LG, HTC and Motorola are the leading smartphone and tablet makers.
6. Worldwide adoption of Google Nexus devices may be slow, but they're the first devices to run the latest Android version, making them an essential part of testing. In contrast, it takes eight months to get the latest Android version on non-Nexus devices.
7. Three months after its release, iOS9 has stabilized with a 70% market share. Of users who are not on iOS9, 22% are using iOS8. It's critical to test on both of these major platforms.

8. Windows 10 adoption is faster than previous versions, according to market share numbers. Based on our analysis, Windows 10 will soon be the second-most popular desktop OS in most geographies.

General Insights

9. Screen size, screen resolution and pixel per inch (PPI) all have implications when running apps and websites. The bigger the PPI number on a normal screen size and resolution, the higher the visual quality. But at the same time, CPU and battery resources will be exhausted to meet that high PPI. The key is to test your app across a variety of PPI ranges on the leading devices.

PPI 515

PPI 401

PPI 131

10. Each organization's testing requirements will be unique and based on their industry and customer analytics. Our indexes provide a recommended baseline and reflect the market, however to get a fully matched index for your business, you need to consider your application types, your geographies, and your own analytical data and merge that with your index. For instance, airline consumers tend to use smartphones while media consumers are likely to use tablets and PCs.

About Perfecto

Perfecto enables exceptional digital experiences. We help you transform your business and strengthen every digital interaction with a quality-first approach to creating web and native apps, through a cloud-based test environment called the [Continuous Quality Lab™](#). The CQ Lab is comprised of real devices and real end-user conditions, giving you the truest test environment available.

More than 1,500 customers, including 50% of the Fortune 500 across the banking, insurance, retail, telecommunications and media industries rely on Perfecto to deliver optimal mobile app functionality and end user experiences, ensuring their brand's reputation, establishing loyal customers, and continually attracting new users. For more information about Perfecto, visit www.perfectomobile.com, join our [community](#), or follow us on Twitter at [@PerfectoMobile](#).
