Why We Created This Index

Perfecto's customers often ask a simple question: On what devices and browsers should I be testing my apps and websites? As a digital quality market leader with over 1,500 customers, Perfecto is uniquely positioned to give the most accurate answer. In this report, we've merged our exclusive enterprise data with current market usage data to provide a benchmark for the devices, operating systems and web browsers to test on in the pursuit of digital excellence. It's the culmination of what we've learned from our most-valued customers and we're excited to pass these insights on.

Are You Testing on the Right Digital Platforms?

As more businesses transition to “digital” and connect with customers via mobile apps and the web, it’s essential to have the right test coverage to deliver a memorable user experience on any device.

And this is precisely why we’ve been publishing our Digital Test Coverage Index each quarter: to help app developers, testers

and product managers develop a strategy for multi-device interactions that will cover all their markets and user profiles.

As always, the goal is to deliver continuous quality and a winning digital experience. Let us help your digital teams plan their test coverage accordingly.

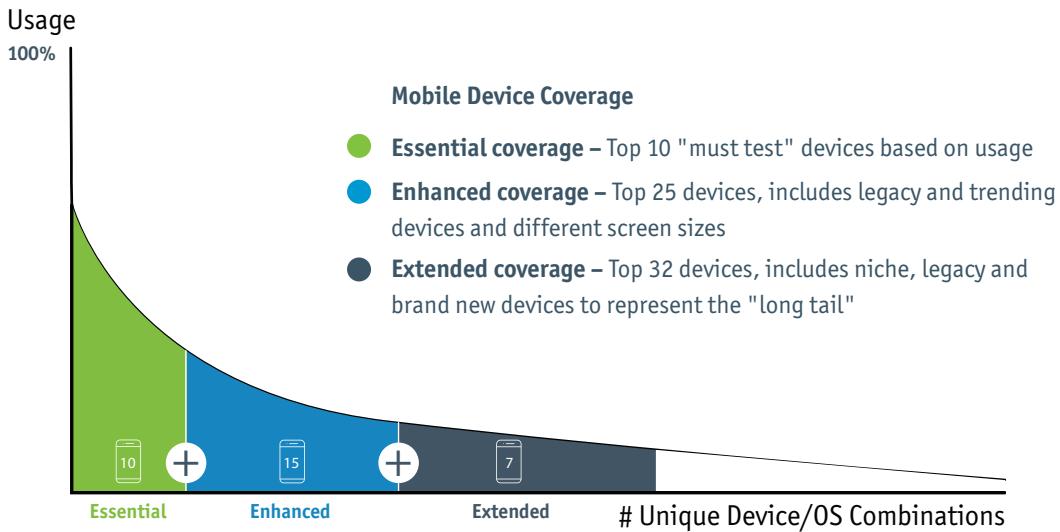

How We Built the Index

No single data source tells the full story, so for these indexes we've combined exclusive Perfecto lab and mobile market usage data in various countries with our own analysis. (In previous index reports, we measured market data based on sales, not usage.)

The indexes offer up-to-date benchmarks that list the top smartphones, tablets and operating systems based on usage. **These are the device/OS combinations on which you should develop and test your mobile, web and responsive web apps.** For desktop browsers, we include one index that can be applied to all 13 countries in the report.

How to Read the Index

Each country featured in the report gets its own digital coverage profile with testing recommendations for mobile devices and operating system versions to create a holistic view of what's required for digital quality testing.

To identify the best device test coverage for you, you'll first need to determine your device coverage goal.

Our **list of 32 devices** per index for each country is winnowed down from hundreds of possible devices to give you the maximum coverage with the fewest devices possible. Each index is divided into three groups—"Essential", "Enhanced" and "Extended" (See graphic above). Each group includes the previous group's devices. If you're testing covers all 32 devices across the three groups, you'll have the most complete recommended test coverage and the least risk.

Select your country and then refer to the corresponding device list, making note of the "recommended OS version" column to see the

recommended testing mix of devices and platforms. We include an up/down arrow or equal sign to indicate usage changes since last quarter. Devices that are new to the index or are reference devices running the latest OS are marked as such.

In our standalone global **Web Test Coverage Index**, we list the browser/OS combinations—categorized by Latest, Previous and Newest Beta—that organizations in any country should test on to achieve the desired market coverage. Given that browser versions update quickly and often automatically without users knowing, it's important to test that browser quality aligns with the appropriate OS version.

And finally, because the digital market is so dynamic, we've included updated **mobile market and web calendars** showing what device models and OS versions (mobile) and browser/OS combinations (web) to look out for this year.

Key Takeaways

Market Insights and Recommendations

1. Beta version testing has become critical. iOS 9 and above versions have been released as beta versions to public users as well as developers. Browser beta versions are also key for testing due to silent auto browser updates for Chrome and Firefox. Testing on beta versions reduces risk and gives DevTest teams the time to address issues before release.
2. Android 6 (Marshmallow) market share is shifting and is expected to rise as new Samsung devices get Android 6 updates. This OS should be added to your test coverage mix on both Nexus and Samsung devices.

Android

3. The Android N developer preview was recently released as a first step to its October launch. The only devices that support Android N previews are Nexus devices, so be sure to include them in your test lab.

Regional Insights (for countries new to this edition)

4. Android is the most dominant platform in the **Netherlands**, with Samsung in the lead (50% share). HTC and Sony are also strong, with 7% and 5% shares. Apple holds around 25% market share, while Windows Phone devices have 10% share.
5. Vendors leading the **Chinese market** are Xiaomi and Huawei, followed by Samsung (see other Chinese phonemakers below). Apple holds around 19% market share after showing growth with the iPhone 6 launches. Because Android leads the Chinese market with more devices than other markets, a mix of more device/OS combinations will increase coverage and reduce risk.

Lenovo ONEPLUS OPPO ZOPO

6. In **Brazil**, Android dominates with 90% usage, leaving the remaining share to iOS. The low-income demographics in Brazil have a key impact on users' device selection. The most popular Android devices in Brazil are either legacy devices, or new but inexpensive devices.

What We've Learned from Customers

While writing this report, we spoke to dozens of enterprise customers making the shift to digital. Here's what we learned:

The IT/Business Disconnect

In less advanced organizations, IT and business groups do not collaborate, resulting in no access to customer analytics for DevTest teams. In such cases, teams do not know what their customers are actually using and their strategy depends mostly on market share data.

Test Coverage Owners

Test coverage responsibility varies between organizations. Sometimes the "director of QA" is in charge, and in other companies it's a "program manager" or a "VP of digital services".

Keep an Eye on the Market

Too many teams have blind spots because they ignore market trends. Watch the market to keep **test labs configured against older OS versions** that may be exposed to bugs and poor performance.

Test Lab Refresh Rate

We found a lack of knowledge about when to update test labs with new devices and OSes. The majority of organizations do a lab refresh every 1–2 quarters. **We recommend doing so every quarter.**

About Perfecto

Perfecto enables exceptional digital experiences. We help you transform your business and strengthen every digital interaction with a quality-first approach to creating web and native apps, through a cloud-based test environment called the **Continuous Quality Lab™**. The CQ Lab is comprised of real devices and real end-user conditions, giving you the truest test environment available.

More than 1,500 customers, including 50% of the Fortune 500 across the banking, insurance, retail, telecommunications and media industries rely on Perfecto to deliver optimal mobile app functionality and end user experiences, ensuring their brand's reputation, establishing loyal customers, and continually attracting new users. For more information about Perfecto, visit www.perfectomobile.com, join our [community](#), or follow us on Twitter at @PerfectoMobile.
