Why We Created *Factors*

Our customers often ask us a simple question:

On what devices and browsers should I be testing my apps and websites?

As the leader in quality for mobile apps and websites, Perfecto is uniquely positioned to give the most accurate answer. In this report, we've merged our exclusive data with current market data to provide a benchmark of devices, web browsers and user conditions (location changes, apps in the background) to test on, to aid in your pursuit of digital excellence. This is the culmination of what we've learned from our most-valued customers and we're excited to pass these insights on to you.

How We Built Factors and How To Read It

No single data source tells the full story, so for these indexes we've combined exclusive Perfecto data and mobile market usage data across a variety of countries into our own analysis.

The indexes offer up-to-date benchmarks that list the top smartphones, tablets and operating systems based on usage. These are the device/OS combinations on which you should develop and test your mobile, web and responsive web apps. For desktop browsers, we include one index that can be applied to all 14 countries in the report.

How to Read Factors

Each country featured in the report gets its own digital coverage profile with testing recommendations for mobile devices and operating system versions to create a holistic view of what's required for digital quality testing.

To identify your most optimal test coverage, you'll first need to determine your device coverage goal.

Devices that Matter to You

Our list of 32 devices per index for each country is winnowed down from hundreds of possible devices to give you the maximum coverage with the fewest devices possible. Each index is divided into three groups—"Essential", "Enhanced" and "Extended" (See graphic above). Each group includes the previous group's devices. If your testing covers all 32 devices across the three groups, you'll have the most complete recommended test coverage with the least risk.

Select your target country and then refer to the corresponding device list, making note of the "recommended OS version" column to see the recommended testing mix of devices and platforms. We include an up/down arrow or equals sign to indicate usage changes since last quarter. Devices that are new to the index or are reference devices running the latest OS are marked as such.

Testing Web Browsers

In our standalone Web Test Coverage Index (pg. 6), we list the browser/OS combinations—categorized by Latest, Previous and Newest Beta—that organizations in every country should test on to achieve desired market coverage. Given that browser versions update quickly and often automatically without users knowing, it's important to ensure that browser quality aligns with a variety of OS versions.

And finally, we've included an updated **mobile market and web calendars** (pgs 24 and 25) showing what device models, OS versions and browser/OS combinations to look out for this year.

Note

Factors is an objective reflection of selected markets based on mobile device usage of specific operating system versions. Some of the device and operating system combinations that are recommended in this report may no longer be available from OEMs or wireless network providers due to today's ever-changing market dynamics.

Responsive Web Design-Digital Families

Essential Web Family	Enhanced Web Family	Extended Web Family
Chrome Latest/Win 10	Chrome Beta/Win 7	Chrome Latest/Win 8.1
Chrome Latest/MacOS Latest	Chrome -1/Win 7	Chrome Beta/Win 8.1
Firefox Latest/Win 10	Firefox Beta/Win 10	Chrome -1/Win 8.1
IE 11/Win 10	Firefox Latest/Win 7	Firefox Latest/Win 8.1
Safari Latest/MacOS Latest	Firefox -1/Win 10	Firefox -1/Win 8.1
Edge Latest/Win 10	Safari Latest/MacOS -1	Firefox Beta/Win 8.1
Chrome Beta/Win 10	IE 11/Win 7	Safari -1/MacOS Latest
Chrome Latest/Win 7	IE 1/Win 8.1	Safari -1/MacOS -1
Firefox -1/Win 7	IE 9/Win 7	Firefox Beta/MacOS Latest
Chrome -1/Win 10	Chrome -1/MacOS -1	Chrome Beta/MacOS Latest
	Chrome Latest/MacOS -1	IE 8/WIN 7
Firefox Beta/WIN 7		
Total 10 Browser Permutations	Total 12 Browser Permutations	Total 11 Browser Permutations

The above table provides insights around the 3 coverage buckets, in a similar way to the mobile coverage methodology. The buckets are also broken down by type: Essential, Enhanced and Extended. When building a test coverage strategy for a responsive website, it should obviously cover both Mobile devices and desktop browsers. The optimum strategy will invariably be the one which best merges and satisfies all 3 coverage buckets for mobile and web. If you target an Essential test coverage goal, you should sum the Essential mobile devices and the Essential desktop browsers, and so it goes for Enhanced and Extended coverage goals.

Summary

Coverage Levels	Mobile Device Coverage	Desktop Web (Only) Coverage	Responsive Web Design Coverage
Essential	Top 10	Top 10	Top 20 (Essential Web + Mobile)
Enhanced	Top 25 (Essential +15)	Top 22 (Essential +12)	Top 47 (Enhanced Web + Mobile)
Extended	Top 32 (Enhanced +7)	Top 33 (Enhanced +11)	Top 65 (Extended Web + Mobile)

Key Takeaways

Market Insights & Recommendations

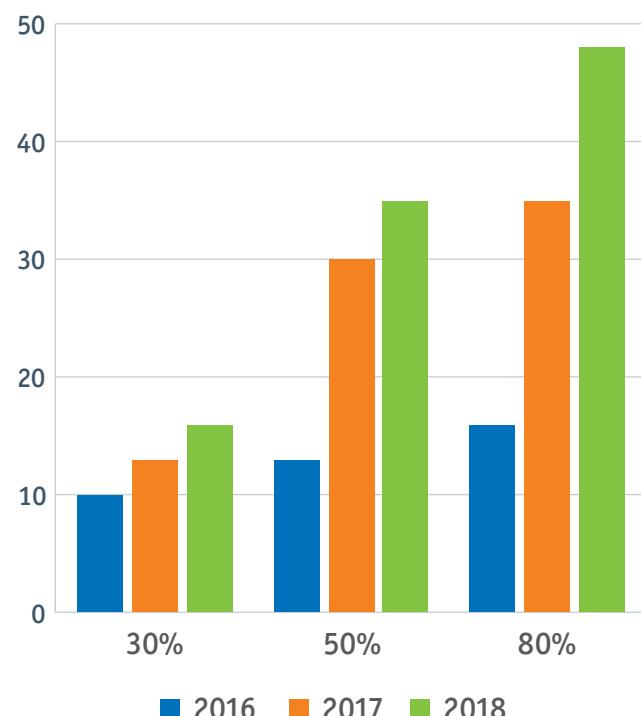

1. This quarter's main market events are the launch of **iOS11** and **iPhone 8** together with the launch of Android Oreo (8.0). The 2 major platform releases are about to disrupt the dev and testing plans for organizations. **For iOS**, teams should plan to allocate iOS10.3.x devices like iPhone 5C and iPad 4th Generation, while most iOS devices will very soon be transitioned to iOS11. The new **iPhone X together with the Apple Watch Series 3** are also a disruption to your dev and test processes, and should be addressed during the upcoming quarter. For Android, Google shifted its Nexus brand to the **Pixel and Pixel XL**, currently enjoying significant market usage, as can be seen in this edition of Factors. Last year, Google made Android 8.0 available for these devices the same day. During this coming October, Google is expected to launch the 2nd generation of Pixel smartphones.

2. **Samsung is the clear Android market leader:** Following the great success of the S7 and S7 Edge, Samsung launched the S8 and S8 Plus, which are already showing high usage across most countries. China is the only exception to Samsung's market dominance. In China, Huawei, Oppo, Vivo and Apple are the market leaders. The newly released Samsung Galaxy Note 8 is also expected to dominate the market — salvaging the Note brand after the Note 7 battery debacle.
3. The mobile market is subject to **continuous fragmentation**. Android, despite Google's efforts to push more vendors to keep up with smartphones updates, is still divided between **Android OS families 4–5**, making the test labs and development support ever harder. As an example, **only 42 android device models** were updated with security patches introduced over the past 2 months.
4. **As in each Factors magazine, the recommendation to cover Beta OS versions** remains an important aspect of your test coverage strategy both from a mobile and web perspective.
5. **Test automation framework and open-source:** with organizations shifting toward open-source test automation frameworks, it is important to **understand the differences** and requirements in order to assign the right one for your projects. In many cases, it's recommended to have a mix of more than 1 framework (e.g. Appium and XCTest UI/Espresso) to allow both dev to develop unit tests and DevTest/QA to

develop system-level functional test automation. From a **web perspective**, with JavaScript being the de-facto testing and dev leading language, we see a clear win for JavaScript-based test frameworks, with Protractor, WebDriverIO, NightWatchJS being those most adopted for functional testing and JSDom as the unit test framework of choice.

6. **BDD (Behavior driven development) practice is becoming more and more adopted** – organizations that are shifting to more agile processes, are choosing BDD as their software delivery practice, and are adopting tools and test frameworks that can support it. Most leading open-source frameworks that are mentioned in insight 5 (above), are able to support BDD, making them even more appealing to developers and testers.
7. **Lab size is expected to grow marginally YoY as the market matures:** The annual growth projection (below) shows a slight growth in a 10-, 25- and 32-device lab based on new devices that are introduced into the market at a higher pace than older devices are retired. What we see is an annual introduction of around 15 leading devices per year with an average retirement of 5-7 per year due to decreased usage, terminated support by vendor etc. Integrating these numbers into the 30%-80% model gives annual growth as demonstrated in the following graph.

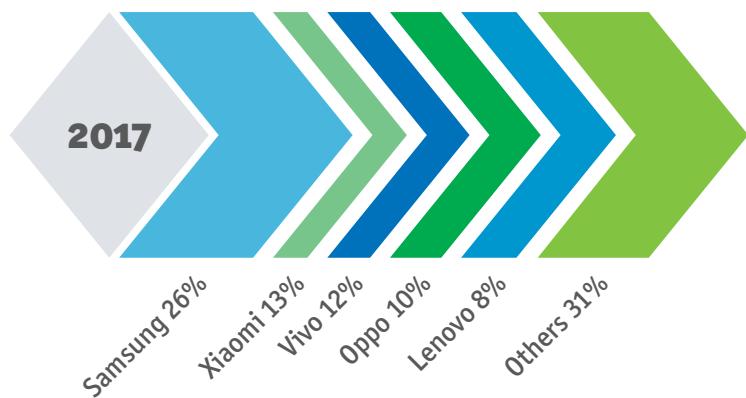

Regional Insights

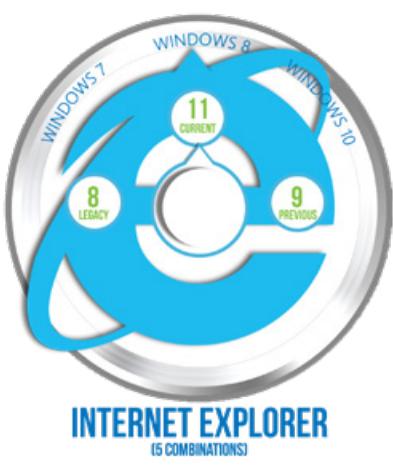

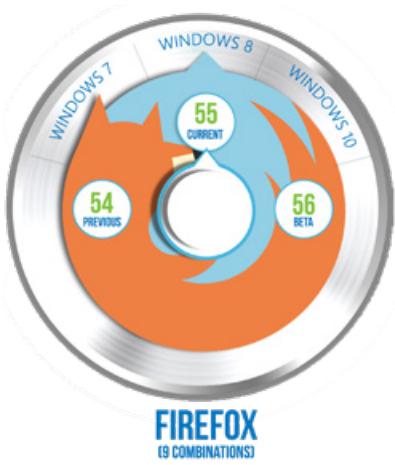

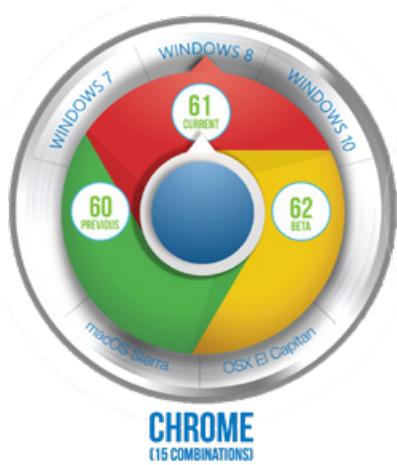

India:

In India, while the market is highly dominated by Android devices, a continuous boost of new smartphones are being released on to the market every few months. That trend requires more validation of the test coverage to provide assurance that the devices under test are still covering the right families. There is no need to chase every new device that comes out, however it is important to validate that from a device [vendor perspective](#), the key families that include Device/

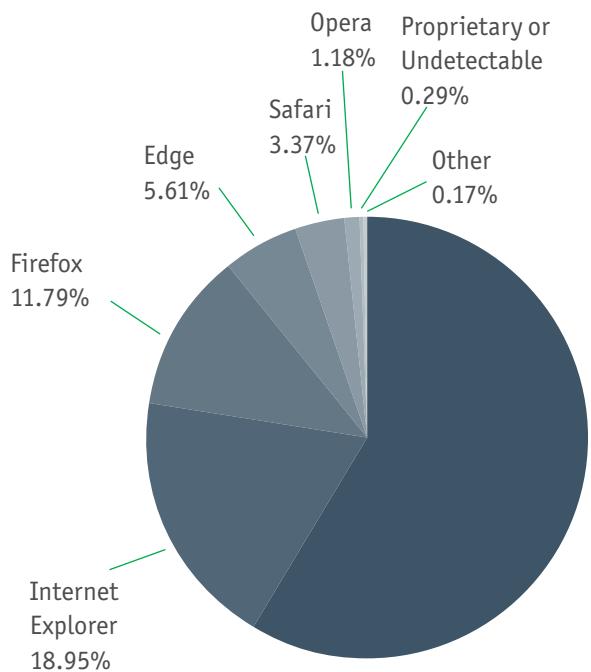

OS/Screen sizes/Hardware are well covered as recommended in the Indian Index. From a vendor perspective in India, Samsung, [Xiaomi](#), Vivo and Oppo are the most dominant vendors followed by Lenovo. Teams should keep an eye on the newly released [Xiaomi Mi A1](#) device that would be the leading Android One mid-range Android device to joins Google's project. The Mi A1 is expected to get constant Android OS updates including the latest Android O update.

About Perfecto

Perfecto enables exceptional digital experiences. We help you transform your business and strengthen every digital interaction with a quality-first approach to creating web and native apps, through a cloud-based test environment called the **Continuous Quality Lab™**. The CQ Lab is comprised of real devices and browsers under real end-user conditions, giving you the truest test environment available.

More than 3,500 customers, including 50% of the Fortune 500 across the banking, insurance, retail, hospitality & travel, telecommunications and media industries rely on Perfecto to deliver optimal web and mobile app functionality and end user experiences, ensuring their brand's reputation, establishing loyal customers, and continually attracting new users. For more information about Perfecto, visit www.perfectomobile.com, join our [community](#), or follow us on Twitter at @PerfectoMobile.
